

03 Food safety and nutrition procedures

03.1 Food preparation, storage and purchase

General

- All staff have up to date certificated training on food safety.

Purchasing and storing food

- Food is purchased from reputable suppliers.
- Pre-packed food (any food or ingredient that is made by one business and sold by another such as a retailer or caterer) is checked for allergen ingredients.
- If food that is not pre-packed (described as 'loose food'), such as sandwiches bought from a bakery is served, then allergen information will have been provided by the retailer, this information must then be shared in the same way with parents.
- Parents are requested not to bring food that contains nuts. Staff check packets to make sure they do not contain nuts or nut products.
- Bulk buy is avoided where food may go out of date before use.
- All opened dried food stuffs are stored in airtight containers.
- Dried packaged food is not decanted from packaging into large bins or containers as this prevents monitoring of sell by/use by dates and allergen information.
- Food is regularly checked for sell by/use by dates and any expired items are discarded.
- Items are not stored on the floor; floors are kept clear so they can be easily swept.
- Perishable foods such as dairy produce, meat and fish are to be used the next/same day. Soft fruit and easily perishable vegetables are kept in the fridge at 1- 5 Celsius.
- Packaged frozen food should be used by use by dates.
- Food left over should not be frozen unless it has been prepared for freezing, such as home-made bread or stews. Hot food should be left to cool for up to 1.5 hours and then quickly frozen.
- Freezer containers should be labelled, dated and used within 1-3 months.
- Fridge and freezer thermometers should be in place. Recommended temperatures for fridge 37 degrees Fahrenheit (3 degrees Celsius), and freezers 0 degrees Fahrenheit (-18 degrees Celsius). Temperatures must be checked and recorded daily to ensure correct temperatures are being maintained.
- Freezers are defrosted every 3 months or according to the manufacturer's instructions.

- Fruit and vegetables stored in the fridge are washed thoroughly before refrigeration to reduce risk of pests and E.coli contamination.
- Items in fridges must be regularly checked to ensure they are not past use by dates.

Preparation of food

- Food handlers must check the content of food/packets to ensure they do not contain allergens.
- Food allergens must be identified on the menus and displayed for parents.
- Food handlers wash hands and cover any cuts or abrasions before handling food.
- All vegetables and fruit are washed before preparing.
- Where a microwave is used, food is cooked according to manufacturer's instructions. Generally, it is not used to heat children's food and never used to heat babies' bottles.

Serving Food

- Staff risk assess the likelihood of children with dietary restrictions accessing the food of other children and must take appropriate action to prevent this from happening, for example:
- Tables are cleaned before and after, with soapy water or a suitable non-bleach product.

E.coli prevention

Staff who are preparing and handling food, especially food that is not pre-prepared for consumption e.g. fruit and vegetables grown on the premises, must be aware of the potential spread of E.coli and must clean and store food in accordance with the E.coli 0157 guidance, available at:
